

One important clue for this analytic story is money. The monetary value of individual player, the money each league spend on the team building and transferring, are great support or good reflection of the competitiveness of these entities.

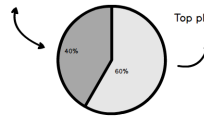

Eventually we are going to generate insightful analysis about how money or value relates to all factors in this industry and the predictive trend in terms of our conclusion in competitiveness analysis of each entity in this soccer world, players, teams or leagues.

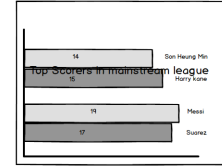

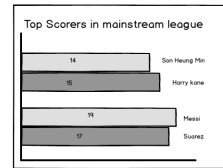

From a shallow point that we want to probe into the soccer world, to have a quick review of who are the best ones and outstanding in this industry, simply looking at the most expensive players. Seeing the graph of the individual value ranking we have general knowledge of the top players list: Ronaldo, Messi, Neymar ... these are supporting material we can conclude that as they show up in different ranking.

Top players as Midfielder

Top players as Forward

As we want to have more insightful knowledge about what value individuals can output in terms of soccer profession, here is some good graphs to generate insights.

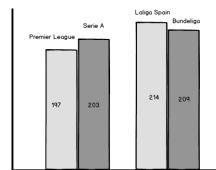

The distribution for top players in terms of positions, most of them are midfielder and forward....

The ranking of assists and goals, we select the top players in this ranking and generally know who they are and why they can correspond to the value ranking.

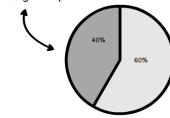

The better technical performance would lead to higher personal value and market impact.

Total Goals Statistics in Mainstream Leagues

La Liga in Spain

Top Players distribution in mainstream leagues

And getting to know about the general knowledge of top players Distribution --- a good indicator of the league competitiveness, we can summarize their distribution within different mainstream leagues, which comes to the second part of our analysis, the league competitiveness.

In the second part we would compare the distribution of the top players along with some technical analysis regarding the performance statistics, total goals, assists, and so on.

The Leagues are having great competitiveness when they are supported by great budget, and hence the distribution of top players and technical performance.

The money spent on the transfer along with the technical indicators like total goals is also functional statistics indicator for league competitiveness.

At the end of this analysis and story, we aim to let audience know who and which league is dominant in this world and what are the relationship between soccer and money, it is sometimes a simple relationship, which says money is a main drive, yet the causal relationship is yet to be analyzed in-depth.
